The 2010 Census data was previously being used for the burden calculations. Starting with this week of data reports, the updated 2020 Census data will be used for community burdens and overall North Shore burden. The 2020 age breakdowns have not been released yet, meaning the burden by age tables will still be based off the 2010 data. The tables will be updated as soon as the 2020 age data is released.

The 2019 American Community Survey data was used to calculate vaccination rate to align with the WI Department of Health Services.
